

AceryCal: a SPC to achieve BP targets

The combination of perindopril and amlodipine achieves BP target in 3 months²; it complies with step 1 and step 2 of the drug treatment strategy.

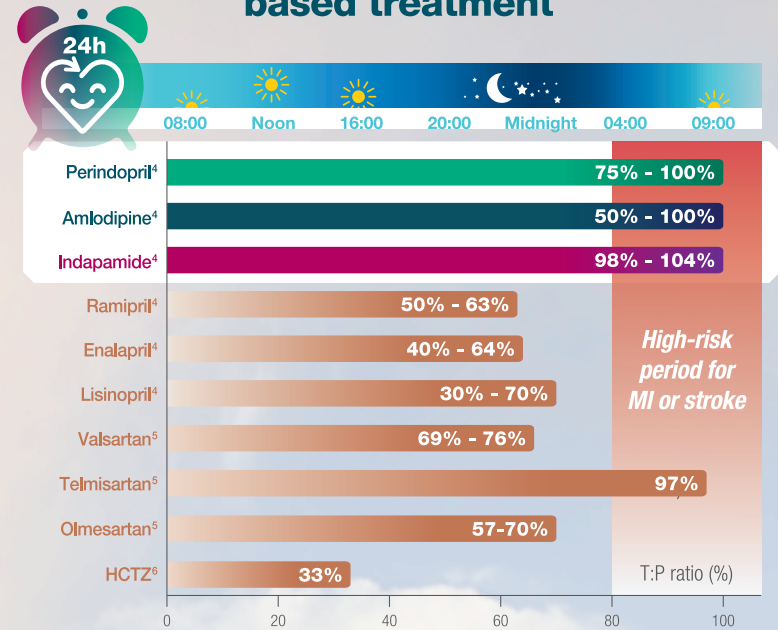

Triplexam: a SPC to guarantee efficient BP reduction

The combination of perindopril, indapamide, and amlodipine guarantees effective BP reduction³ adapted to patients' needs which complies with steps 3 and 4 of the drug treatment strategy. The reductions in blood pressure were baseline-dependent: the greater the severity of hypertension, the greater the decrease in BP.

SPC: single-pill combination; BP: blood pressure; SBP: systolic blood pressure; DBP: diastolic blood pressure.

24 hours control with perindopril based treatment

Unique mortality benefits^{7,8}
